

Tribe Uncovers \$36K in Savings with 1 Drug Change

Midwestern Tribal Entity

- 1,600 Member Lives
- 1 Drug Referral
- \$36K in Annual Savings

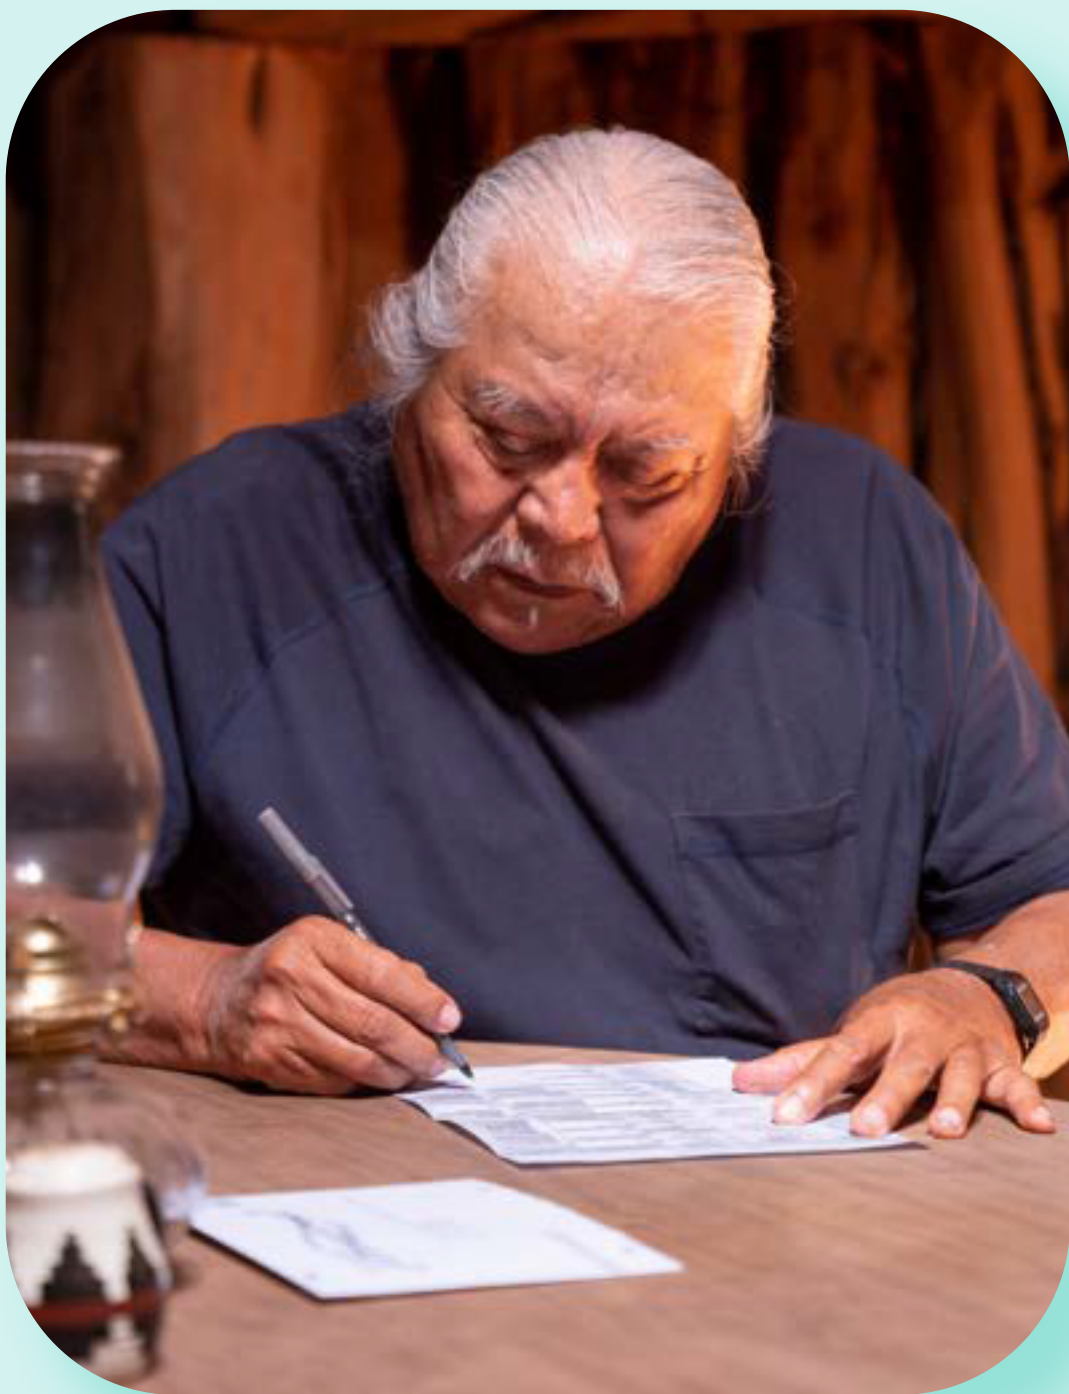

Real savings unlocked with

RxBenefits®
Optimize 340B

The director of pharmacy for a Midwestern Tribal Entity learned how to take control of their unwieldy 340B program with the help of experts at RxBenefits, and together created a plan to strengthen the tribe’s internal clinic through tribal member referrals.

RxBenefits uncovered \$880K in projected net savings for the tribe.

Specialty Referral: Key to Savings

One of the tribe’s members had a formulary override allowing them to fill their specialty prescription through a mail-order pharmacy not affiliated with the tribe.

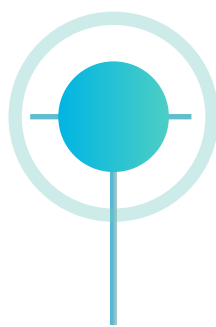

The medication cost the plan \$19K per 12-week course.

After speaking with the tribal clinic patient, the director of pharmacy reviewed data and 340B plans from the experts at RxBenefits. They found the expensive prescription fill could move to the tribe’s in-house clinic pharmacy.

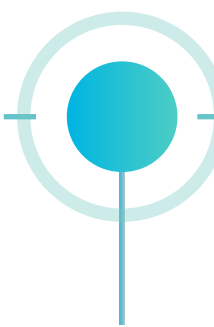

From Strategy to Impact

The tribal clinic patient now receives their specialty drug through the tribe’s in-house clinic pharmacy.

The tribal pharmacy can access 340B pricing for the medication, **saving the plan \$36K annually.**

The director of pharmacy hopes to repeat the success with other tribal clinic patients visiting pharmacies outside of their community.
